[NFC Light ALE](#)
NFC Light ALE

- [1 Download](#)
- [2 User Guide](#)

This section describes the NFC Light ALE application software developed by the POPS team, Inria-Lille. This software includes a light-ALE which can be implemented in NFC-enabled mobile phones (we choose the Nokia 6212 classic in our tests). This application can read (and write) data from (and to) NFC tags.

Download

You can download the application source files from [here](#).
