iPOJO [iPOJO](#) is a component model for OSGi-based applications. iPOJO is flexible and extensible. It could

be adapted in a lot of application context (including applications with small memory footprints) by customizing/extending container. JUnit4OSGi [JUnit4OSGi](#) is a test framework executing JUnit tests on an OSGi runtime. JUnit4OSGi provides a JUnit++ environment specialized for OSGi, several runners and a maven plugin.
